Key Findings

The Quarterly Reports of the *Swiss Trade Monitor* document time trends in Switzerland’s foreign goods and services trade of the most recent completed quarter. Not only are exports and imports considered in total, but these are broken down to provide a detailed analysis of Switzerland’s trade development with its largest trading partners and most important product groups. Due to differences in data release schedules, the first edition of 2024 sheds light on the first quarter of the year for goods trade and the fourth quarter for services trade. Here are some key observations:

- Switzerland’s foreign goods trade in Q1 2024 was about eight percent lower than in Q1 of 2023. Both imports and exports fell by eight percent.
- While pharma exports declined significantly, imports grew in a YoY-comparison with Q1 of 2023. Large declines in mineral fuels (HS-27) decreased both imports and exports. This partially reflects price changes.
- While goods trade with nations such as Italy and especially Slovenia flourishes, volumes with key partners such as Germany, France, China, or Spain are declining.
- In contrast to the development observed with goods trade, the report shows that Swiss services trade is growing strongly — both on the export and import side.
- Growth in Swiss services imports is mainly driven by transportation services while exports of ICT and tourism services are growing strongly.

1 Swiss Trade Monitor

Switzerland is a small open economy. The international exchange of goods and services is crucial for the nation’s economic prosperity. The aim of the *Swiss Trade Monitor* is to document key trends in Swiss foreign trade.

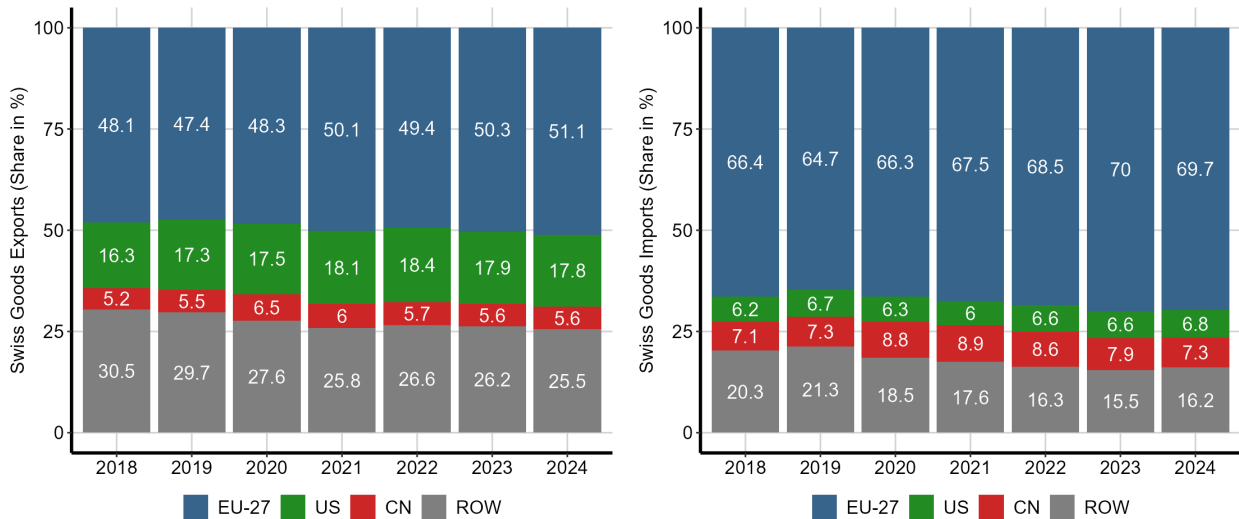

The quarterly reports provides an up-to-date account of Switzerland’s foreign trade. We distinguish trade in goods and services. For both, the report illustrates major trading partners, dominant product/service groups, and key time trends. In addition, detailed data are presented for the three major partners (the EU-27, the United States, and China). Data on the goods trade exists on a monthly frequency and up to the most recent quarter. Services trade data is available on a quarterly basis, trailing by one quarter.

The data sources for this report are the Swiss Federal Office for Customs and Border Security (FOCBS) as well as the Swiss National Bank (SNB). Unless stated differently, the goods trade data excludes gold and other precious metals (the FOCBS refers to this as “Total 1”).

2 Swiss Foreign Goods Trade

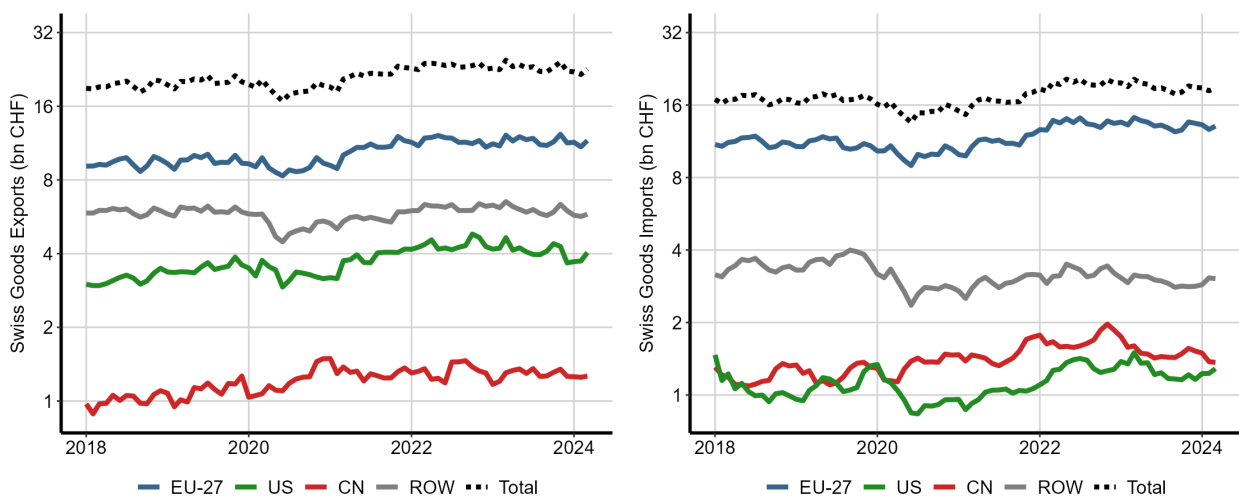

2.1 Key Partner Countries

Most of Swiss foreign goods trade occurs with three partners: the 27 nations of the European Union (EU-27), the United States, and China. Collectively, these three partners accounted for around 73% of exports and 84% percent of Swiss imports in 2023. Comparing recent years, the three partners' share of both ex- and imports has increased noticeably, especially driven by the EU.

Note: The figures show annual shares of Switzerland's total goods exports (left) and imports (right), separated by major partners (EU, USA, China) as well as the rest of the world (ROW). Figures in the bars denote shares of trade in percent.

The EU-27 accounts for about half of all exports and more than 2/3 of Swiss imports.

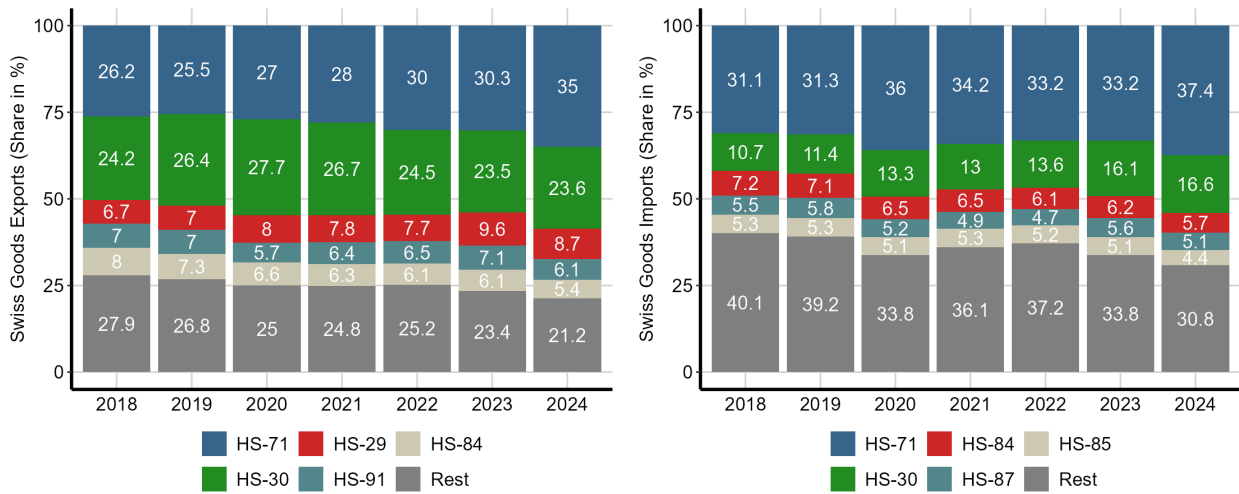

Note: The figures show Switzerland's total monthly goods exports (left) and imports (right) in total and for its three most important partners (EU, USA, China) as well as the rest of the world (ROW).

2.2 Main Products

When considering Swiss trade including gold and precious metals (the so-called Total 2), a small number of product groups play a major role. Swiss *exports* are dominated by gold (HS 71) and pharmaceutical products (HS 30) which together account for more than half of all exports. Chemicals (HS 29), watches (HS 91) and machines (HS 84) are the next most important product groups. The remaining 20-25% of exports consist of other products.

On the *import* side, gold is also by far the most important product, accounting for roughly a third of the total value. Pharmaceutical products (HS 30), machines (HS 84), cars (HS 87), and specialized machinery (HS 85) collectively account for another third of Swiss imports.

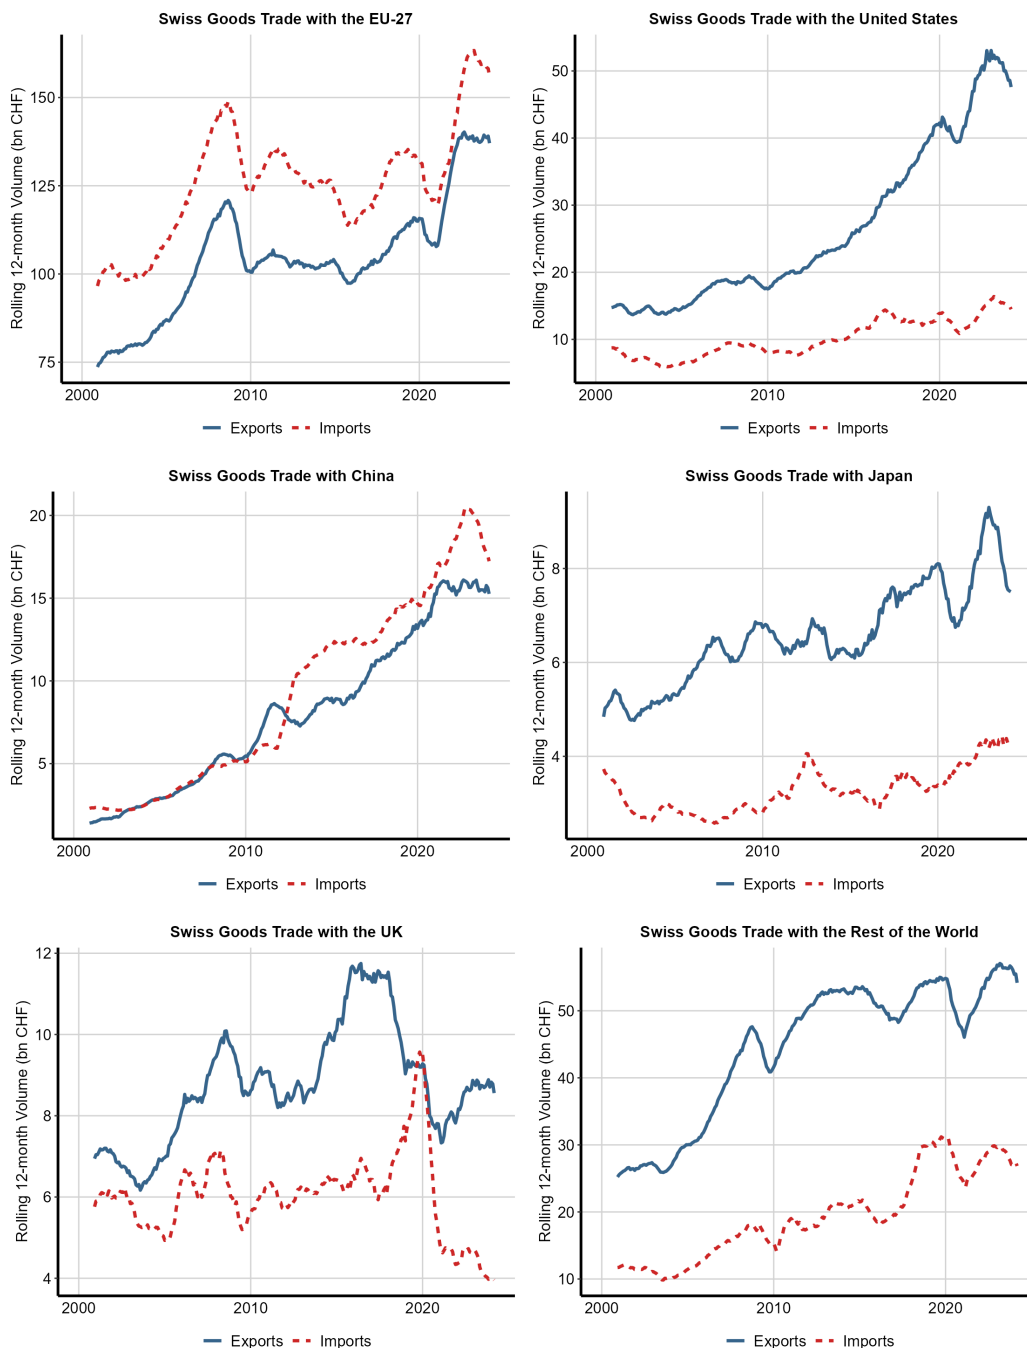

Note: The figures show annual shares of Switzerland's total goods exports (left) and imports (right), separated by largest product groups. Gold and precious metals are included. Figures in the bars denote shares of trade in percent.

2.3 Time Trends

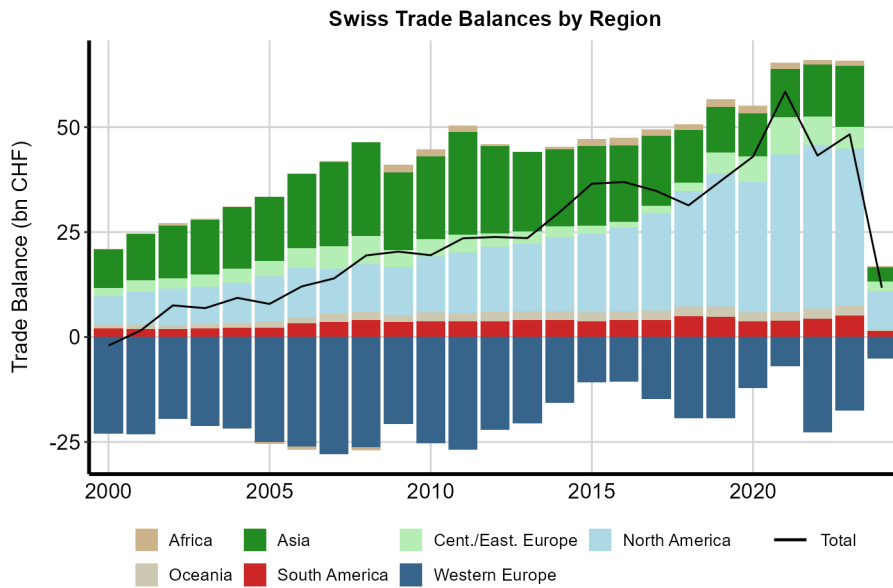

2.3.1 Exports to and Imports from Key Partners

There are striking differences across partners when considering Swiss ex- and imports since 2000. The trade deficits with both the EU and China have widened substantially. In contrast, Switzerland runs an increasingly large surplus with the UK and especially the US.

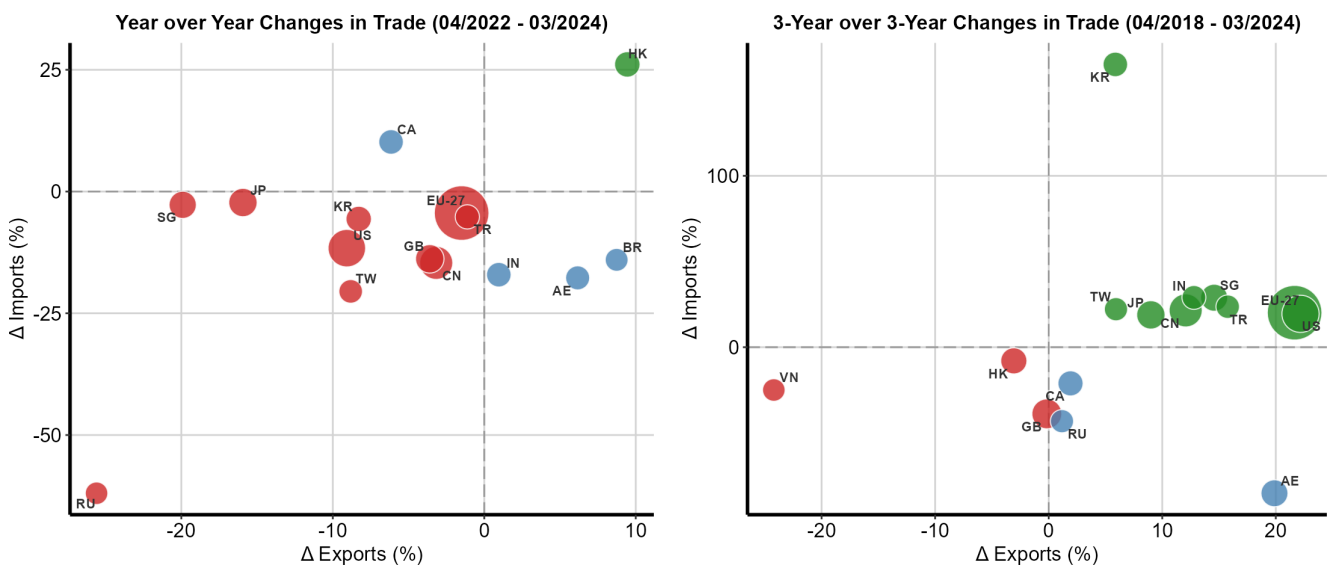

Note: The figures show Switzerland's foreign goods trade since 2000 with five partners and the rest of the world (ROW) on a rolling 12-month basis.

It is insightful to plot the trade balance (exports less imports) by continent. Positive values indicate that Switzerland exports more than it imports. Individual country trade balances can be found in the detailed country reports below.

Note: The figure shows Switzerland’s balance in foreign goods trade since 2000 with five partners and the rest of the world (ROW) on a rolling 12-month basis. Negative values imply that Swiss imports exceed Swiss exports.

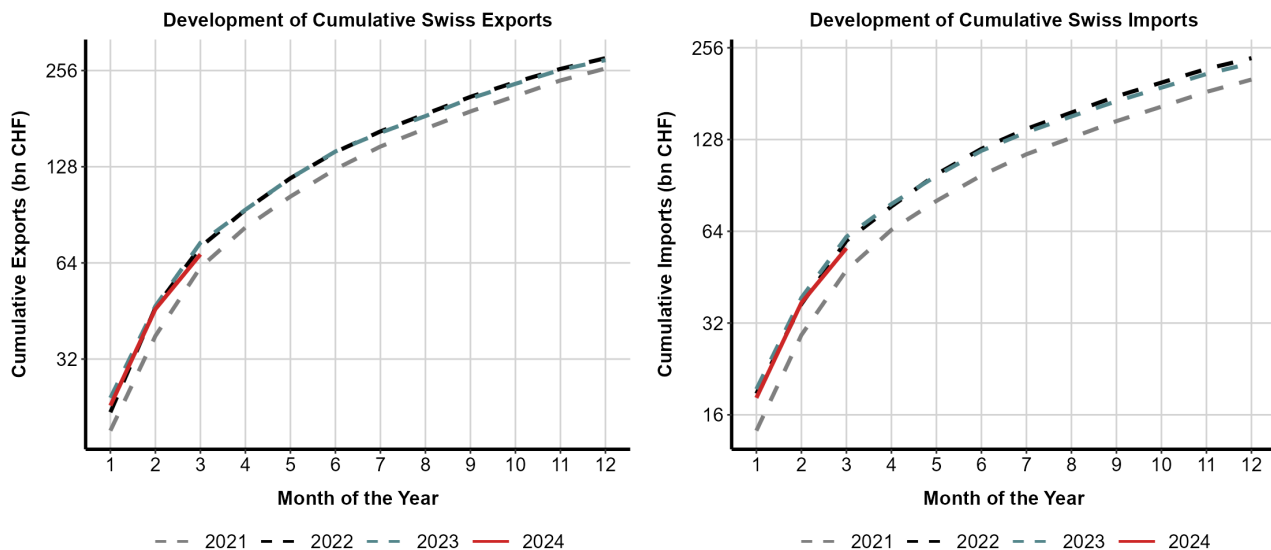

The following two figures show how Switzerland’s goods trade has evolved over the last year and three years relative to the previous periods. Most partners are located in the center when looking at the last year, while they are placed in the upper right area (i.e., growing) for the 3-year comparison.

Note: The figures show year-over-year (left) and 3 year-over-3 year (right) changes in trade, separated by exports and imports for the largest partners. They indicate how the past year or three years have performed relative to the past year or three years before. The size of the bubble indicates the partner’s trade volume.

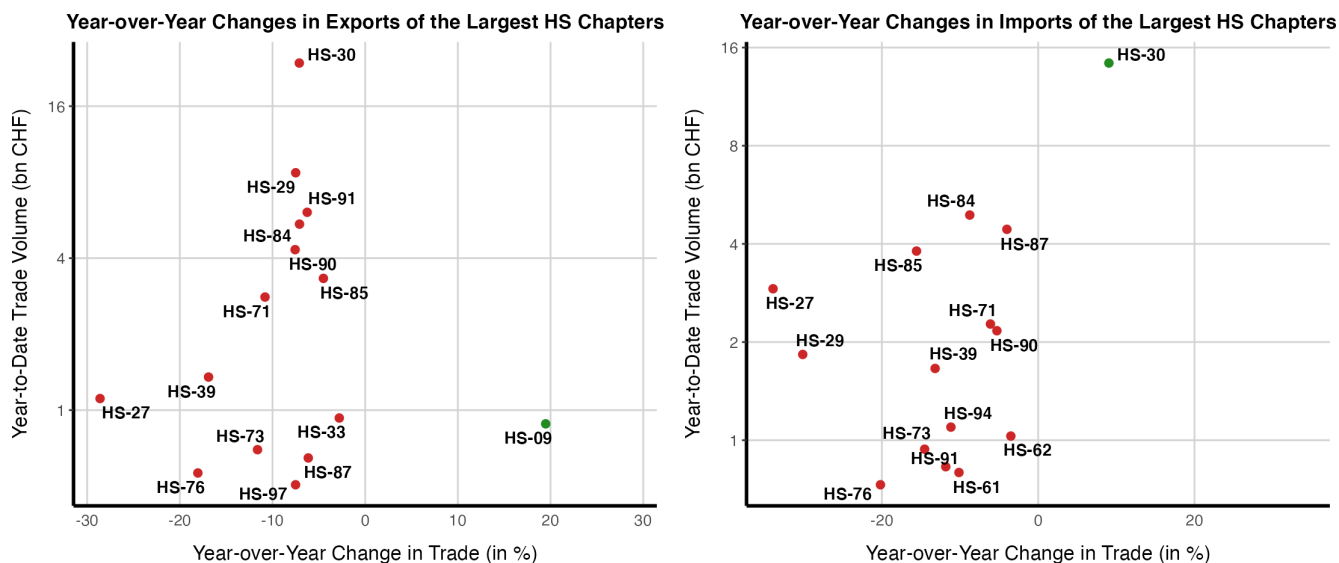

2.3.2 Exports and Imports of 2024 in Comparison

The following figures provide an overview of how Switzerland's foreign goods trade evolved since 2021. Cumulatively, exports and imports in 2024 are on a similar path compared to 2022 and 2023. These years are in turn have recorded higher trade volumes compared to 2021.

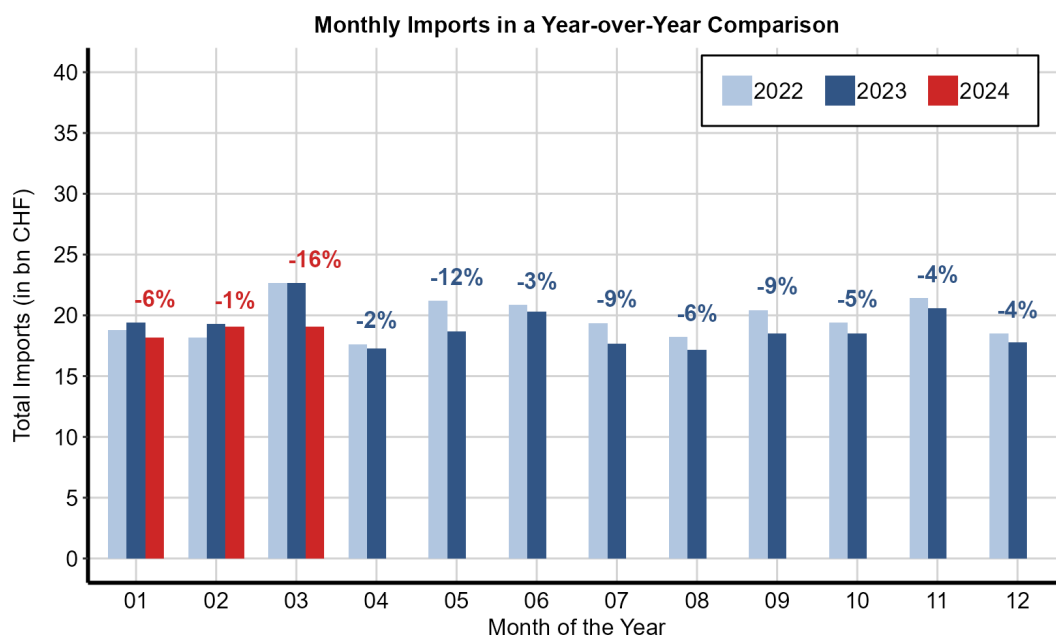

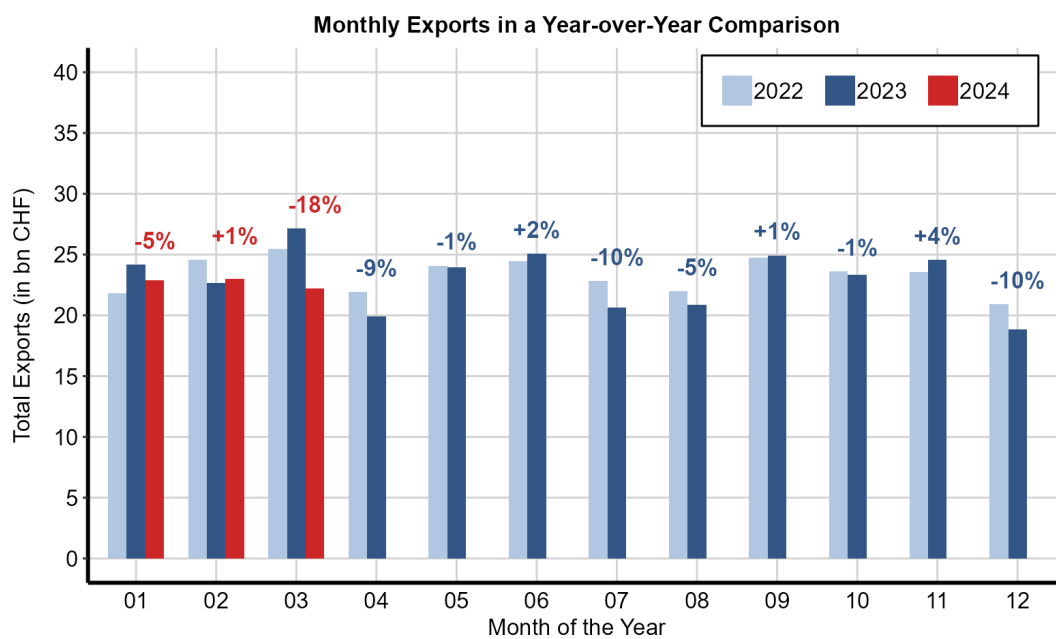

Note: The figures show the development of Switzerland's cumulative goods trade flows for four separate years. In this way trade flow patters during the year can be compared to previous years.

The figures below provide an overview of year-over-year changes in trade of the most important product groups, for exports and imports separately. Year-over-year changes are depicted in relation to a product group's trade volume since the beginning of the year.

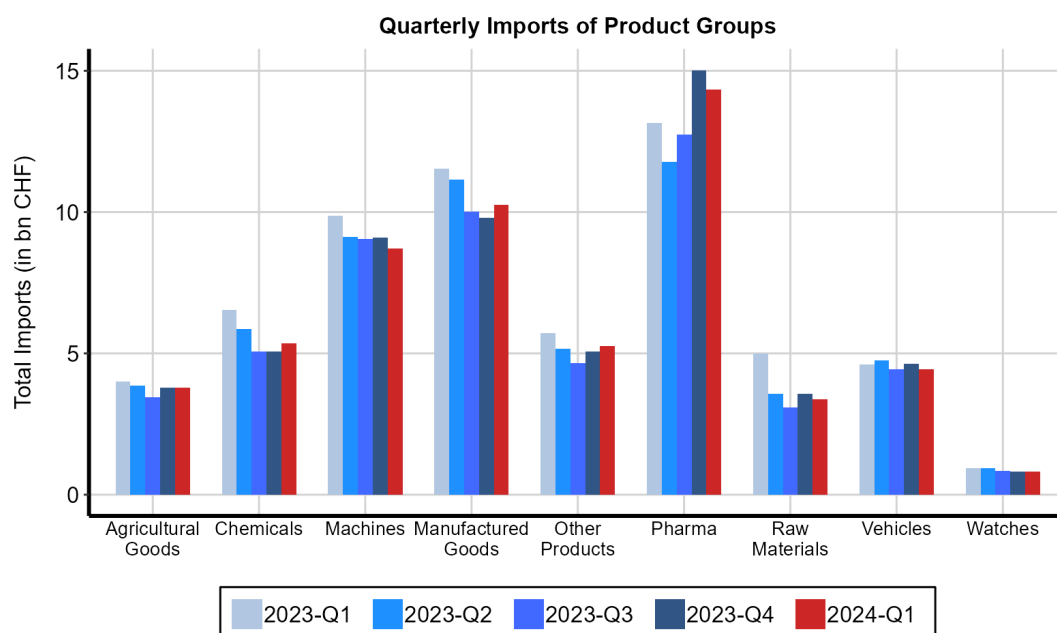

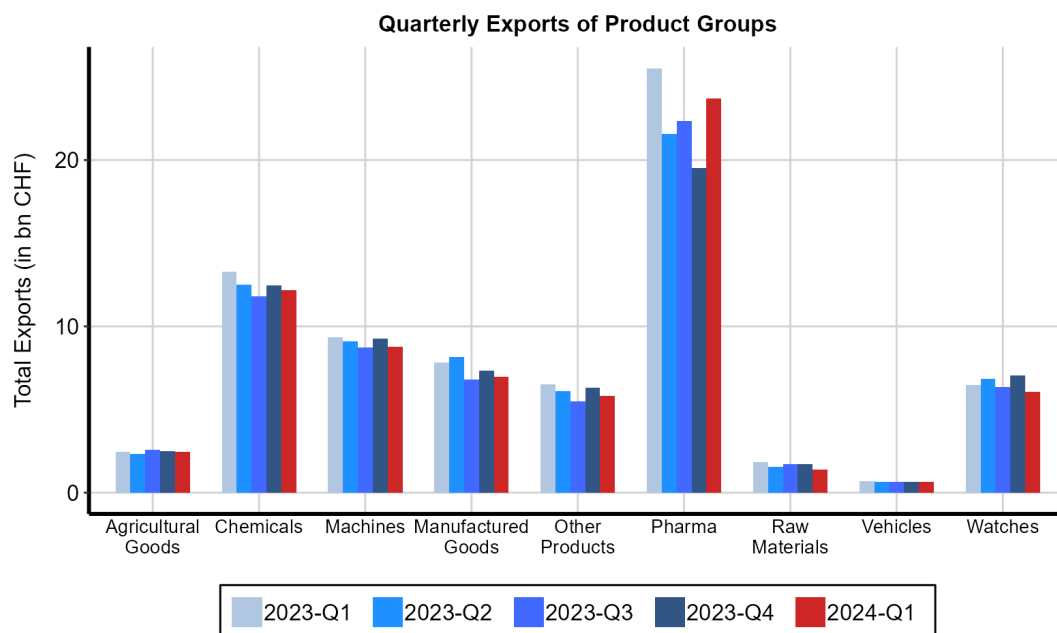

Note: The figures show the Year-over-Year changes in trade (horizontal axis) relative to the Year-to-Date trade volume (vertical axis) of the largest HS chapters. The upper right position of the figure contains goods with both high growth and a high volume. The bottom left position contains goods with low or negative growth and a low trade volume.

Note: The figures show Switzerland's foreign goods trade for three separate years (2021–2023), on the basis of monthly data. Percentage figures correspond to year-over-year growth rates.

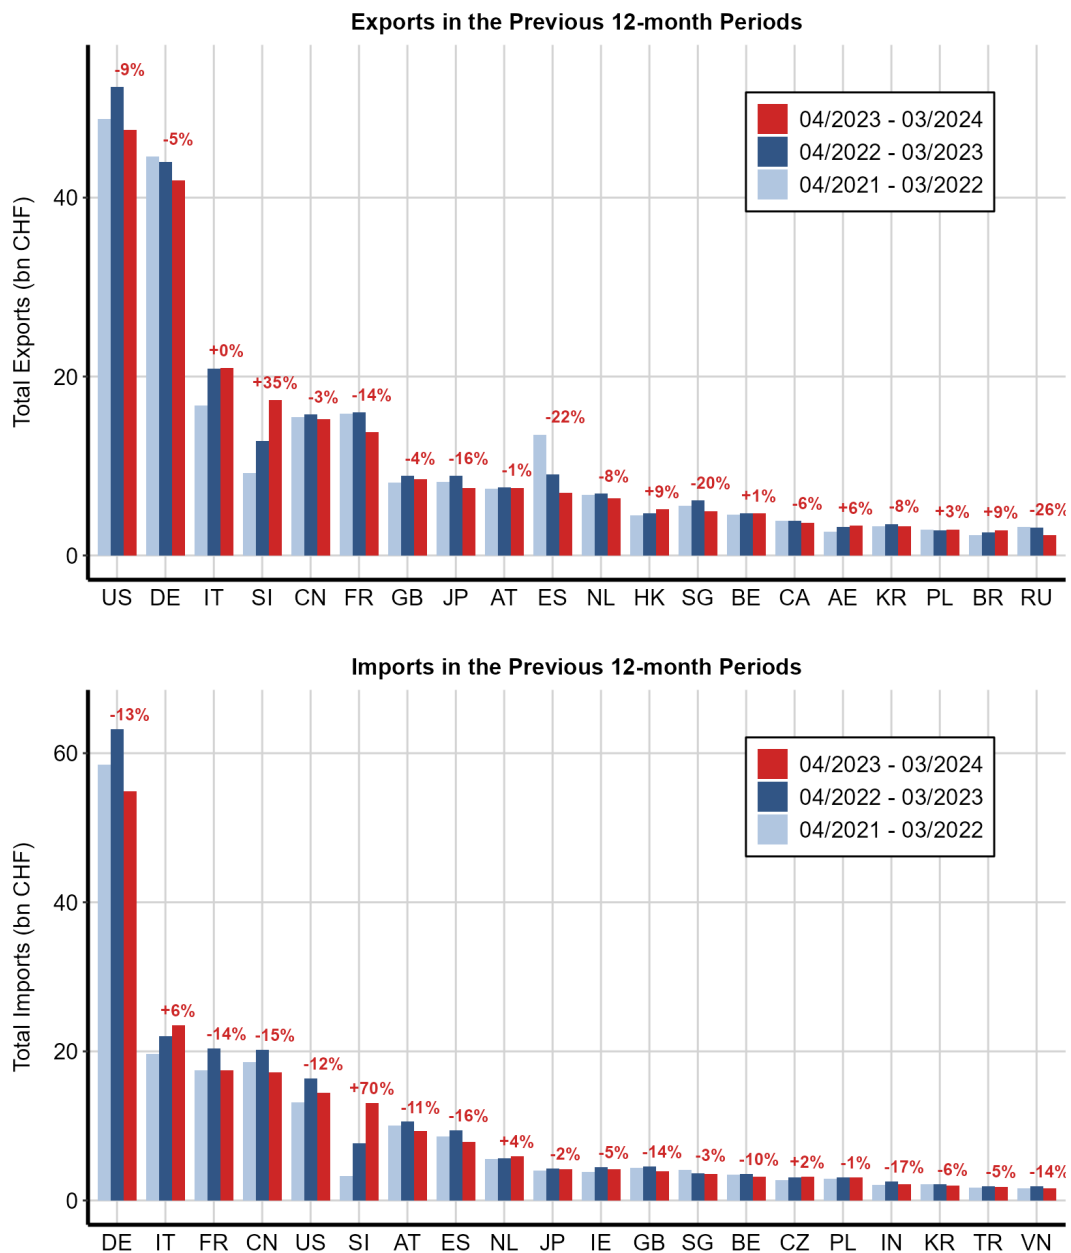

A comparison of quarterly exports and imports by product group reveals that the latest quarter has not surpassed previously set records. On the export side, chemicals, machines, and manufactured goods are in a downward trends. On the import side, decreases in the nominal value of imports are affected by price effects. For information on product group definitions, refer to Appendix II.

Note: The figures show Switzerland's foreign goods trade for five separate quarters (2022 Q1 to 2023 Q1), separate for exports (top figure) and imports (bottom figure). The product groups are explained in the appendix.

2.3.3 Trailing Twelve Months in Comparison

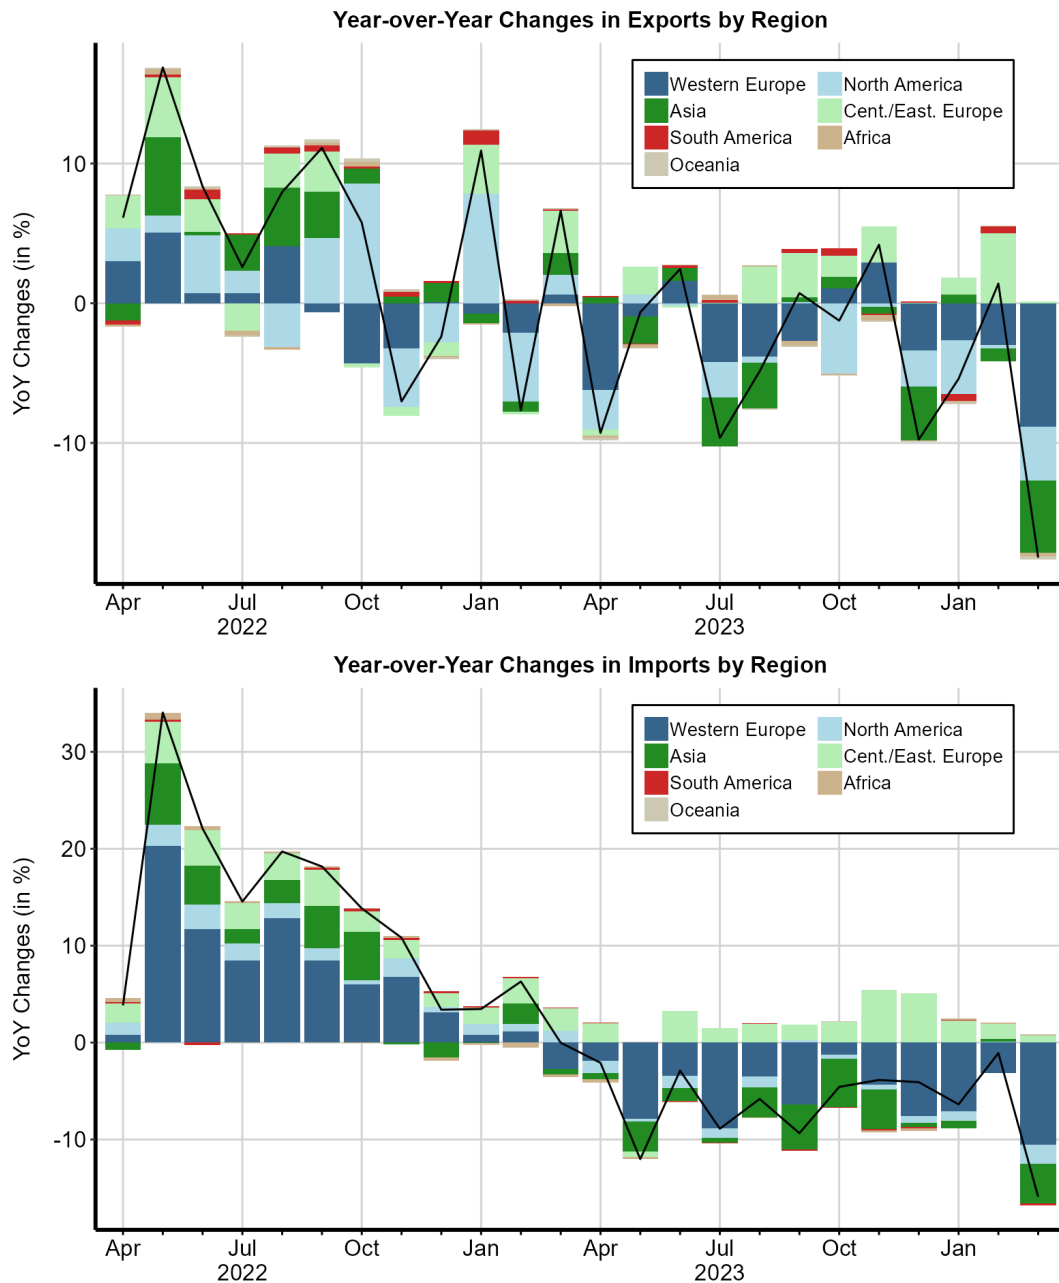

Looking at key trading partners in the last twelve months and comparing it to the trailing twelve months, we see that exports to partners like Slovenia, Hong Kong and Belgium have increased sharply. In contrast, exports to the U.S., Germany or France have dropped. On the import side, trade volumes with Slovenia and Italy have recorded strong growth while the trade with Germany, France and China has dropped. For a list of ISO-2 country codes, refer to Appendix IX. For more information on the rapid rise of Slovenia (SI) as a trade partner, refer to the eighth edition of the Swiss Trade Monitor series.

Note: The figures show Switzerland's foreign goods trade of the three previous 12-month periods for the top 20 trade partners in a decreasing order. Percentages indicate the year-over-year growth rate.

2.3.4 Year-over-Year Changes by Region

The following figures depict year-over-year changes of Switzerland's foreign goods trade in percent, aggregated and separated by region. The value in a given month thus reads as the percentage change from the same month one year ago. Changes are caused by both price and quantity effects. Price effects are changes in the value of trade resulting from price changes. Quantity effects relate to changes in the value of trade resulting from a changes in the quantity of goods.

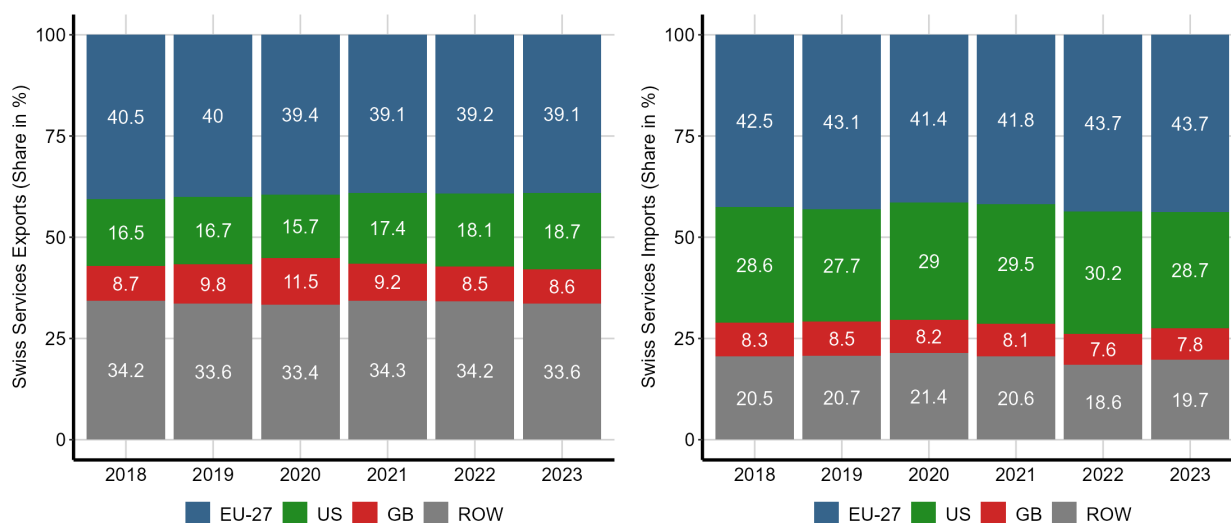

Note: The figures show year-over-year changes of Switzerland's monthly foreign goods trade in percent, separated by world regions. The black line represents the total year-over-year change of Switzerland's monthly foreign goods trade in percent.

3 Swiss Foreign Services Trade

3.1 Key Partner Countries

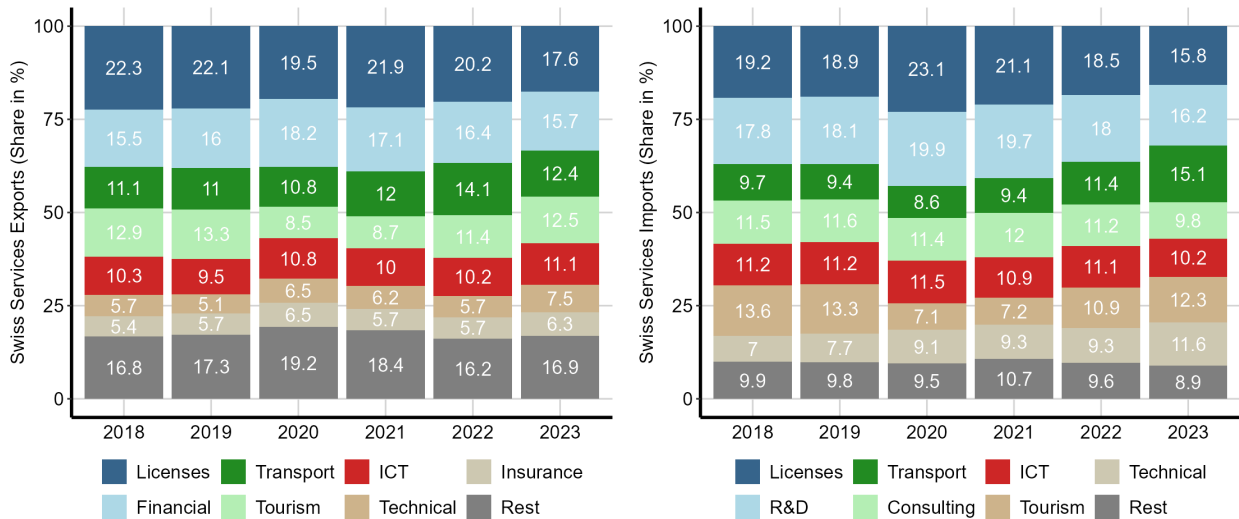

As in the goods trade, the EU-27 constitutes Switzerland’s most important partner in the services sector. For both exports and imports about 40 percent is accounted for by the EU member countries. They are followed by the United States and the United Kingdom. Notably, the US accounts for more than a quarter of Swiss services imports. The export and import shares of major partners have been relatively stable since 2017.

Note: The figures show annual shares of Switzerland’s total services exports (left) and imports (right), separated by major partners (EU, USA, GB) as well as the rest of the world (ROW). Figures in the bars denote shares of trade in percent.

3.2 Main Services

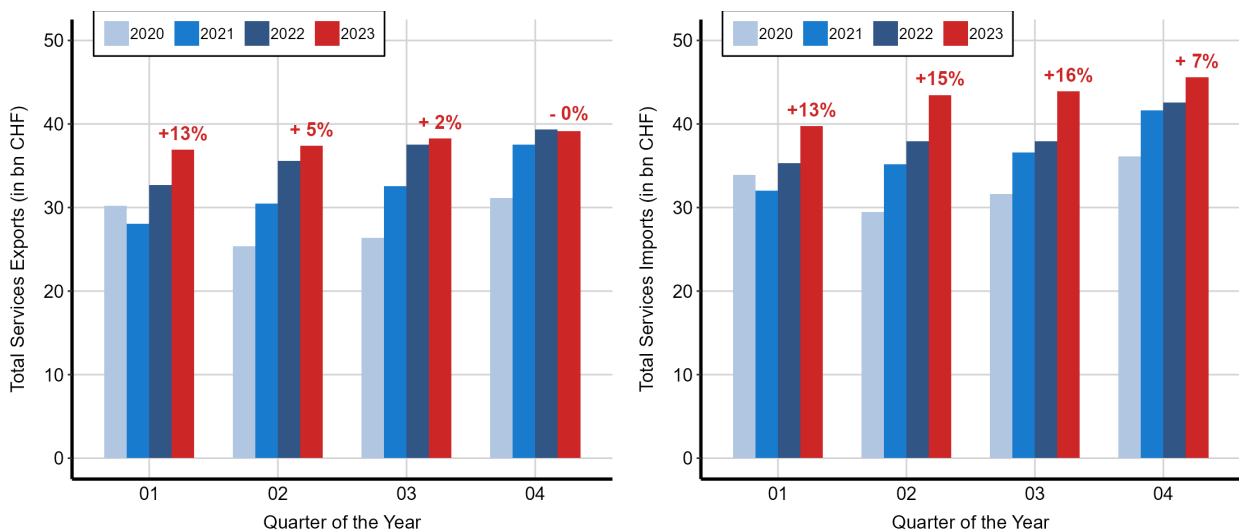

Swiss service exports and imports by service type are shown in the figure below. In general, shares for the seven major service types appear fairly evenly distributed. Consequently, the Swiss services trade is not marked by a few highly important components in the same way the goods trade is. License, transport and financial services make up roughly half of Swiss exports, while half of the imports are composed of the former two and R&D services. Throughout the seven years depicted, shares appear relatively stable apart from some minor changes, notably in 2020. For more information on service type definitions, refer to appendix three.

Note: The figures show annual shares of Switzerland's total services exports (left) and imports (right), separated by major services types. Figures in the bars denote shares of trade in percent.

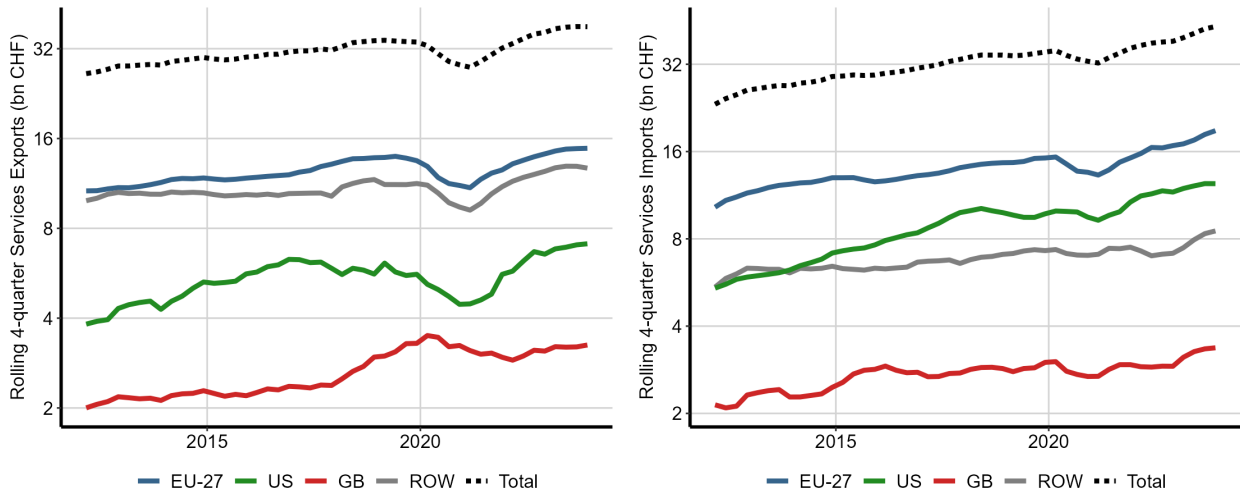

3.3 Time Trends

When comparing the fourth quarter of 2023 with the previous year, we observe a seven percent increase in services imports and no meaningful change in exports. The comparison across the previous four years also reveals the continuous growth of Switzerland's services trade: Volumes of almost every subsequent quarter exceeded the previous one.

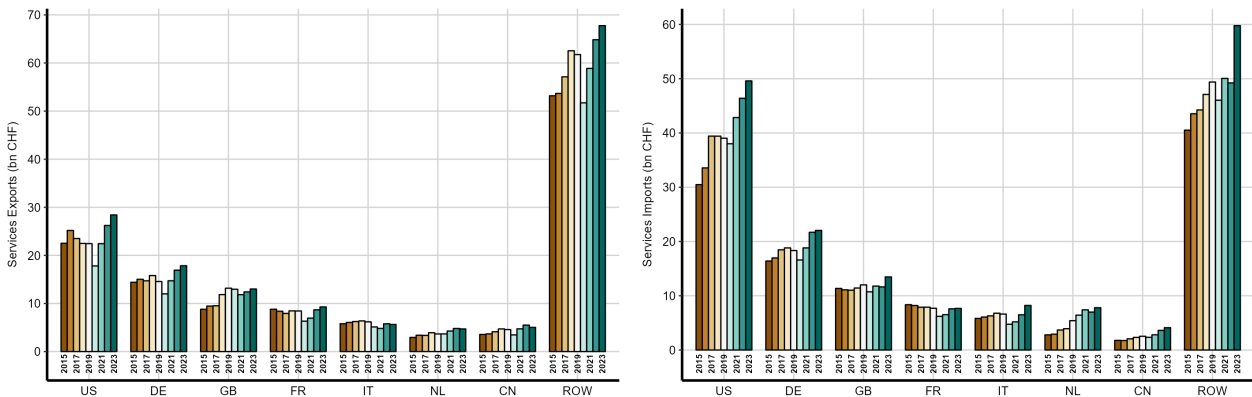

Note: The figures show Switzerland's foreign services trade for four separate years on the basis of quarterly data. Percentage figures correspond to year-over-year growth rates.

Looking at the past decade, both exports and imports of services have increased as shown below. Trade levels were negatively affected by Covid-19 pandemic. They have since recovered from the related dip in 2020 and 2021. Services exports to the UK have not yet recovered fully, still remaining below the pre-Covid peak at the beginning of 2020. For more information on individual countries, refer to the detailed country reports below.

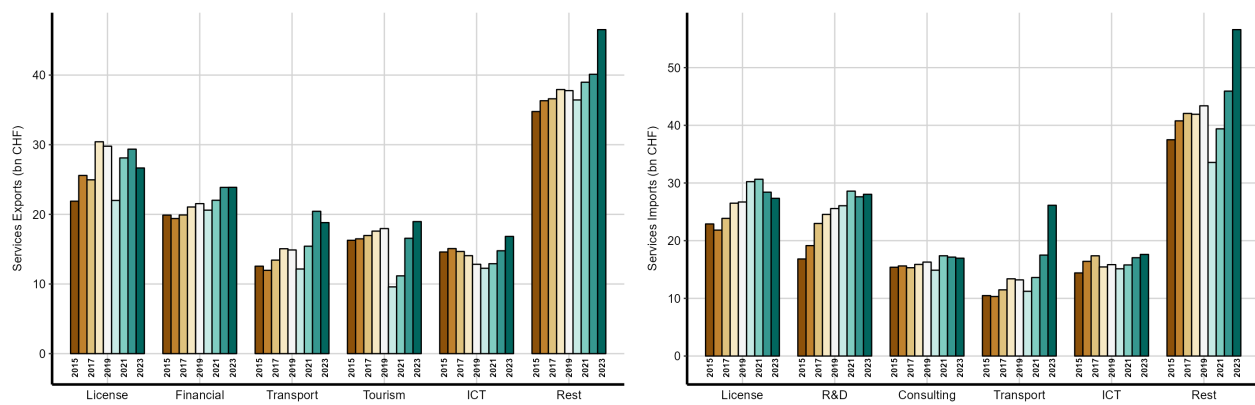

Note: The figures show Switzerland's monthly services exports (left) and imports (right) in total and for its three most important partners (EU, USA, UK) as well as the rest of the world (ROW).

Separating Swiss services exports and imports by trade partner reveals that services imports from the United States and Netherlands have increased substantially in recent years. On the export side, trade with Germany and the United States has increased considerably since 2020, reaching new highs most recently.

Note: The figures show annual volumes of Switzerland's total services exports (left) and imports (right), separated by major trade partners.

Separating annual trade volumes by service types, we observe that in particular the licenses trade has increased strongly in the past decade, both on the export and import side. Considering the effects of the Covid-19 pandemic, the large drop in tourism and transport services is clearly noticeable. In 2023, transport imports have risen sharply, most likely as a consequence of both a growth in passenger travel and the Red Sea Crisis starting in 2023, the latter having substantial effects on commercial shipping routes.

Note: The figures show annual volumes of Switzerland's total services exports (left) and imports (right), separated by major services types.

4 Detailed Country Reports: Goods Trade

This section shows the individual goods trade country reports of the 90 most important partners, by total trade volume between 2020 and 2024, and of Switzerland's total goods trade. These partners together cover 99.5% of Switzerland's trade volume over the specified period. The country reports are based on goods trade data provided by the Federal Office of Customs and Border Security.
